

E-commerce platform on IBM cloud foundry

DEVELOPMENT PART 2

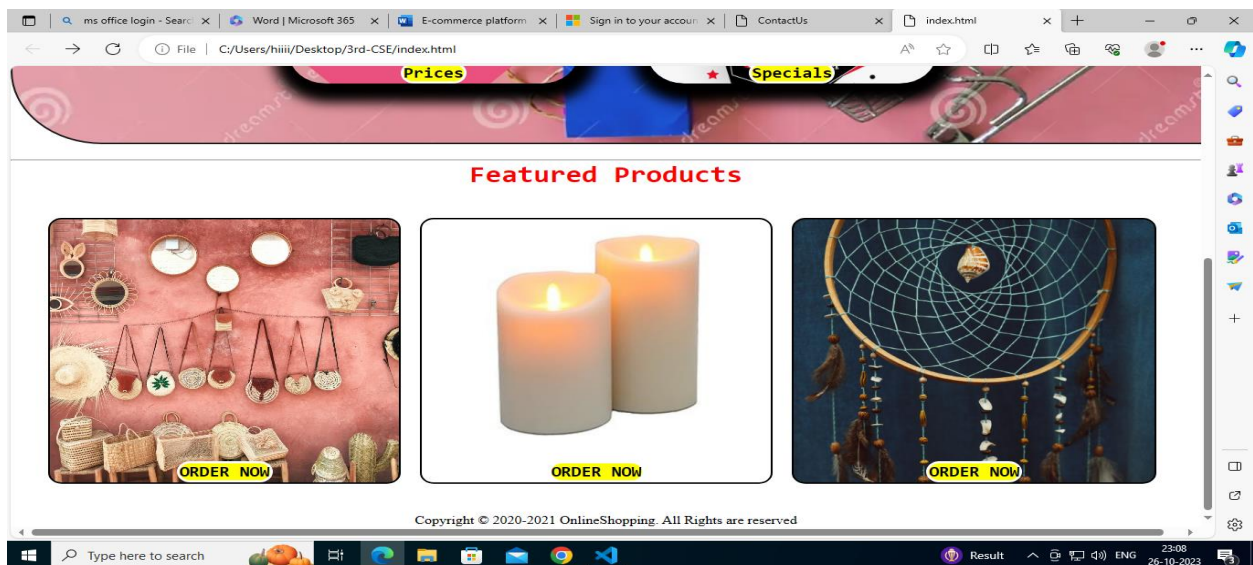

- In this phase we design the continuous of homepage, product listings, shopping cart and user authentication of homemade e-commerce platform.
- We design frontend framework using html and CSS of user interface.
- On IBM cloud account we use Db2 for our database.
- Following images are the design of our e-commerce platform

- This is our layout of our e-commerce platform

- This is our login page of our platform

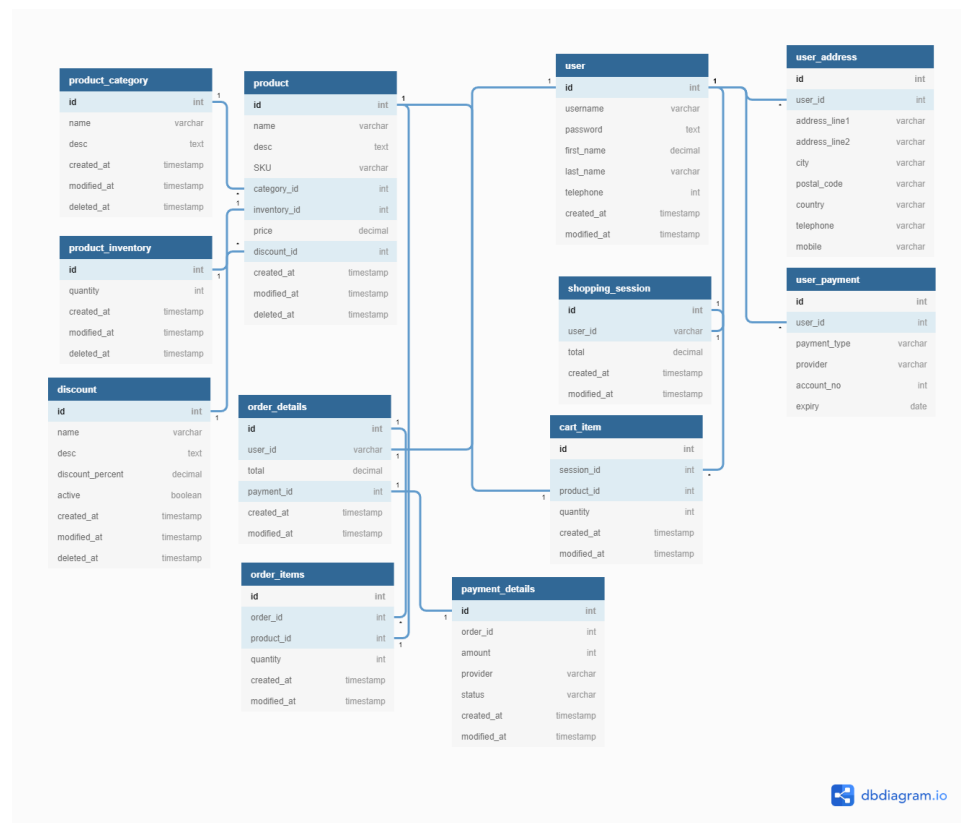

- Here, these are the products of our e-commerce platform

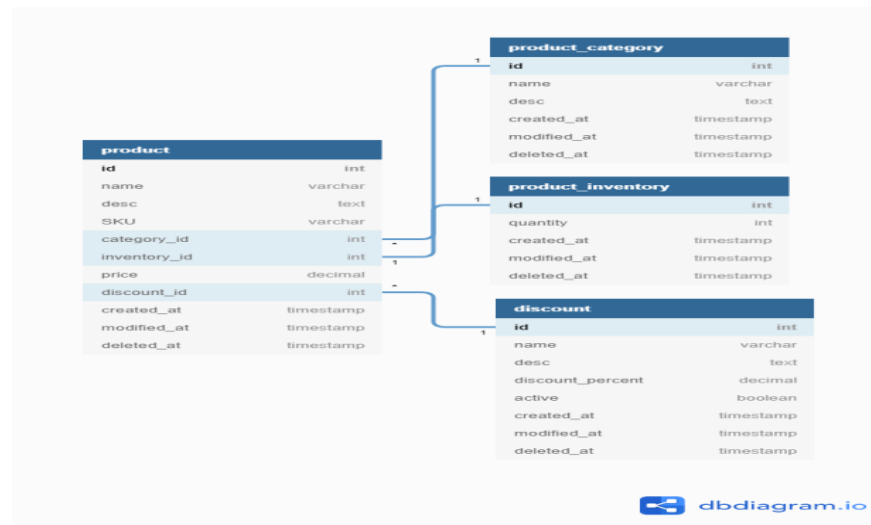

- ◆ We have developed this code for login and index page of our platform using html.
- ◆ Further we create backend functionality and deploy it using IBM Cloud Foundry environment.

Database setup:

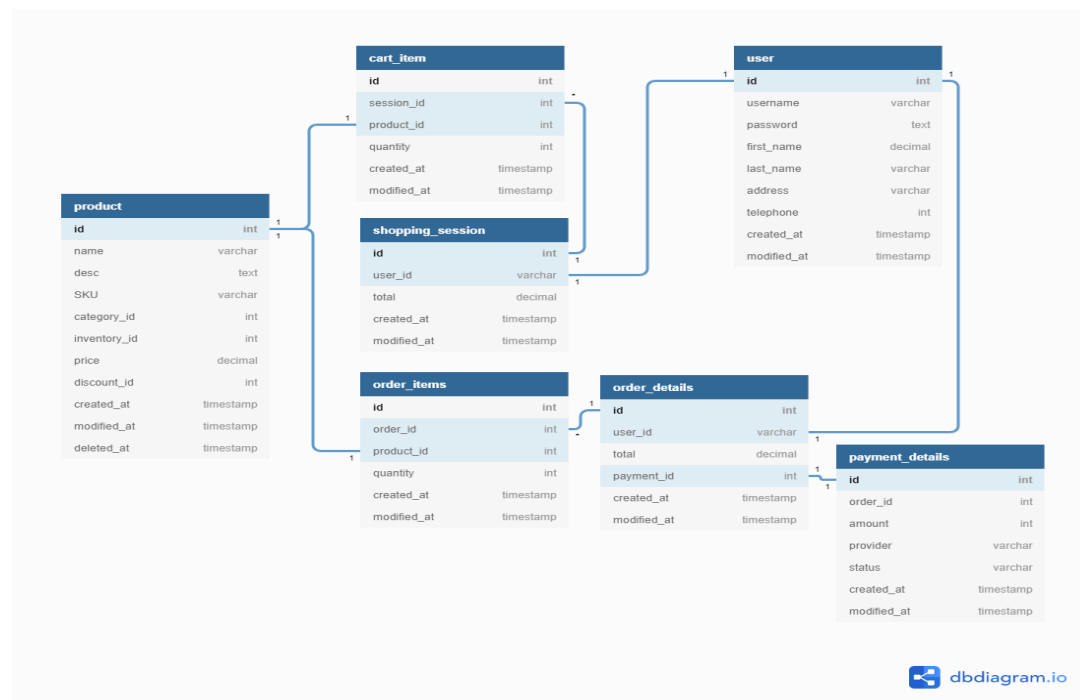

E-commerce platform

Product Management:

Shopping Management:

Here are some of the examples for our e-commerce platform database designs.
